

Big 5 Lung Diseases Workshop of APSR and Union APR

2025 Workshop Summary Report Published in Respiriology & Toolkits Now Available

The Big 5 Lung Diseases Workshop, launched in 2022 by the APSR and Union APR aims to improve the management of five major lung diseases—Asthma, COPD, Lung Cancer, Tuberculosis, and non-TB respiratory infections—particularly in low- and middle-income countries.

Building on the 2022 Workshop, the 2025 Workshop explored practical primary care models that could be adapted and implemented in different healthcare settings.

The 2025 Workshop Summary Report has now been published in *Respirology*, and Toolkits have been developed to support the adaptation and implementation of these models in other healthcare settings.

The Summary Report and Toolkits are available free of charge to support progress towards the United Nations Sustainable Development Goals (SDGs), particularly **Goal 3: Good Health and Well-being**.

Explore the Summary Report and Toolkits

Learn more about the Workshop, explore the Summary Report, and find information about the Toolkits.

1. Visit the Big 5 Lung Diseases Workshop Website
